HOW TO CREATE A COFFEE MUG by @}- - Lisa - - {@

Thank to Nicolas hands (The hands you will saw in the pictures), who help me made this tutorial.

This tutorial will show you how to cut sticker with vinyl and how to apply it on a coffee mug. Note that you can apply the vinyl on many surfaces like metal, wood, glass. This material is easy to apply and you can remove it easily without inconvenient.

STEP 1

Create or import a design in Funtime Scrapbooking Software.

Step 2

Resize the image size to fit on the mug. In this example I have set the height at 3.7'.

⊟ Transform		
- Position		
Width		
- Height		
Condense	×	
W.: 5.891 🚊	0.5	
H.: 3.7 📫	0.5	
Angle : 🚺 🚊	0.5	
According to 1	ancel	
	ncer	
CCC Duplica		
CCC	Apply	

Set the height at 3.7' and click on Apply button

Select Tools -> Transform->Height

STEP 3

Select **File -> Cut Project**. The cutting pannel will open, after that click on Cut Project. Check the weeding options. This option will cut a square around your project. That will made the vinyl peeling process easier and it will save you a lot of vinyl.

Control cutting pannel				
1. Select your media type Sticker film 1 600 Pressure 1 600 Speed 1 600 Speed 1 Sticker film 4 1 600 Speed 1 Stow 5 4 1 Knife Offset 15	2. Advance options Selected object Advance Send to file Mirror Rotate Veeding	3.Media alignement Position Registration Show me Avance page	Cut Project Return Stop cutting Options	
Material 48.0 << All colors (2) Help				

After that click on the option button and check the save material option and the start point orientation option. Once you have select both options click on "OK" button

After that click on "Cut	Cutting & Engraving options	
project" button and your cutter	Cutting	
will start cutting your project.	Weed value : 0.15	Use spooler OK
	Curve resolution : 3	Cut line panel
	Panel overlap : 0	Save material
	Knife Offset: 15	Start point orientation

STEP 4

Wait until the cutter have finished. Take a exacto and peel off the unnecessary vinyl.

For the next steps you will need a squeegee and a transfer tape I have used a transparent tape in this tutorial because it's more easy to apply on the transfer surface.

STEP 5

Apply the transfer tape on your design.

Pass the squeegee on the transfer tape. Put a good pressure on the squeegee and pass it many times.

This step will made the peeling process a lot easier.

Step 6

Peel off the transfer tape. Take your time on this step and be sure that all the elements get stick on the transfer tape. If some element don't stick, repast the squeegee or pass your finger on the transfer tape.

Step 7

Apply the transfer tape on the transfer surface in this case my dollar shop coffee mug.

In this example I have have pass my hand on the transfer to put some pressure on the vinyl. But you can also use a squeegee to apply the pressure.

Step 8

Peel off the transfer tape. Take your time on this step and be sure that all the elements get stick on the transfer tape. If some element don't stick, repast the squeegee or pass your finger on the transfer tape.

Final Result

There is my brand new personalized coffee mug.
